

BytePro Pipeline Reporting Updates

Revised: 08/09/22

In order to reduce the strain on the BytePro database, the following two updates will be implemented, effective 8/9/2022 at 9pm PT.

1. All reports will be capped at 500 rows to display *
2. The Pipeline reports will no longer auto-refresh. You can enter a specific File Name or just select Search to return all records on the reports (up to the 500 max). Previously, upon opening the application, all pipeline reports would be "auto-refreshed"

Please keep in mind, BytePro will show the last report utilized when you log in. For example, if you had the "CSC Master Report" tab open, it will open back up with this report selected

* If you require larger report results, please submit a request via the new project intake form, so that IT can develop one or provide an existing one that utilizes the reporting database (not impacting production application resources).
